Fast Cooking – 3 Easy Tricks How to Prepare Oven Dishes With Minimal Effort

When you are in a hurry and don't have time to cook, using your oven is the least thing you would consider. Oven dishes are not precisely what we consider to be fast cooking, since most of them take quite some time.

Yet I found that my oven is a great asset on days when I am at home but still I don't actually have time to cook. Like Saturdays when I have to do all the housework I never got to during the week. Or Sundays when I would like to prepare a special meal but I don't feel like standing in the kitchen.

There are many oven dishes that taste and look special and impressing whilst requiring only little time to prepare. And once in the oven, they basically cook themselves. I set my timer and quickly check on my food at certain times, and otherwise I can do some other work or simply relax. No need to worry about how long the food will take. That's a perfect opportunity to enjoy long-cooking foods without having to invest much actual working time.

Here are some tips for getting your fabulous dishes into the oven quick:

Use ready-to-use or no sauces

Use easy-to-prepare foods

Only do what you really have to

Tip #1: Use ready-to-use or no sauces

If you need to prepare your veggies and still make a sauce you won't get the preparation done in half an hour, so say goodbye to sauces. If your veggies need liquid to cook, add some chicken or vegetable stock and cover with foil, or cover the vegetables with a mixture of milk and beaten eggs (I use about half a liter and 2 eggs for 1,5 kg veggies).

Alternately, prepare your sauce in advance. Most vegetable or veggie-meat sauces can easily be frozen. If you love your sauce Bolognese for example, cook a lot of in one day and freeze portions of it. When you feel like having a quick lasagna, simply defrost your sauce, add to the pasta, cover with cheese, and done you are.

Tip #2: Use easy-to-prepare foods

Use mainly foods that don't require much preparation. That is everything that does not need to be peeled and has no pips or seeds to remove, like tomatoes, mushrooms, marrows,

Over 350,000 Free Food and 9,000 Drink Recipes

aubergines, broccoli or cauliflower. Peppers, potatoes and carrots are also good to use if you are a bit skilled in peeling and seeding them (tip for preparing peppers faster: quarter them, cut the stem away and wash the seeds off under running water).

If it comes to meat, we talk about everything you just need to wash and season, like chops, fillets or chicken pieces.

Tip #3: Only do what you really have to

Cut your meat and veggies (especially the faster cooking ones) into rather large pieces. If you don't care much whether your food takes half an hour or one hour in the oven as long as you get it in quick, then there is no need to finely chop things. Larger cuts simply go quicker.

You may also want to buy foods that are already washed, peeled, seeded and cut so that you can use them straight away. Many vegetables are available like that. And check the instructions on frozen foods if they can be baked in the oven from frozen.

If you want a cheese topping, buy your cheese grated or grate it a day or two in advance. If you use it often, you can constantly keep stock of grated cheese in your fridge.

If you apply these three simple yet effective tips, you will be able to create great healthy meals in your oven without having to spend much time actually working in the kitchen. Get

your food in the oven quickly, then check on it periodically (don't forget to set your timer) and do whatever you want whilst your food is cooking itself.

Things I've Learned About Dutch Oven Bread That You

Over 350,000 Free Food and 9,000 Drink Recipes

Won't Find in the Recipe

Over the past year, I've learned some things about bread making. And along the way, I assumed that these were things that everybody knew, and I had just been the slow one. I didn't really talk about it much with people, because I assumed that they'd just say, "Well, duh, when did you figure THAT one out?"

But I discovered that most dutch oven chefs also didn't know a lot of the things I was learning, so I started to come out of my shell and share.

So, here are the things I've learned about baking yeast bread in a dutch oven:

* The Recipe is Only Half What You Need

Baking good bread is half ingredients, and half technique. It's as important to learn how to combine the ingredients and what to do with them as it is what ingredients to combine. This is where so many simple recipes fail you.

* Enrichments are great, but not always necessary

Really, all you absolutely need to make bread are four basic ingredients: Flour, salt, yeast, and water. If you can do it

Over 350,000 Free Food and 9,000 Drink Recipes

with those, you can do it with anything else you wanna add. I've learned that with just those ingredients, you can make a very fluffy and tasty bread!

* You Need to Knead

Kneading is not only a great way to mix in the right amount of flour, it also develops the gluten strands and makes it so that the bread can trap the gas that the yeast makes. That makes the bread rise. For so long, I would be frustrated that my bread wasn't rising. It would take FOREVER. I didn't know what was wrong with me. I'd knead the bread as long as the recipe said to, so why wasn't it working?

Just like different flours absorb water differently, they also take varying amounts of kneading. You can't definitively say, "knead for 8 minutes" and know that it'll be enough. You need to do the "Windowpane Test". That's the only way to know.

Cut off a small piece of the dough you're kneading. Roll it into a ball in your palms. Then, working it in a circle, begin to stretch it out flat in the air. Pull it evenly apart, like you're stretching out a pizza dough. Keep stretching it thinner and thinner. Watch how long it takes to tear. If you can stretch it out so thin it becomes translucent, like a window pane, without it tearing, then you've kneaded it enough. If not, put that piece back in the dough ball and keep

Over 350,000 Free Food and 9,000 Drink Recipes

kneading.

* Pre-Heat the Oven

It turns out that when you shove a ball of dough into an already heated oven, that initial blast of heat will make the dough “spring”. The trapped gas expands, the moisture in the dough turns to steam, and the whole ball just poofs. You get a bigger loaf, with a softer crumb.

One simple method is to pre-heat the lid of the dutch oven. After your bread has risen and you’ve shaped it, put it in an oiled dutch oven to proof. In the meantime, put some (a lot) of coals on the lid and set it aside. When the loaf is ready, take some of the coals off the lid and put them in a ring. Set the dutch oven on the ring of coals, and put the lid on. The advantage of this method is that you’re not handling the bread much, and so there’s less of a chance of punching it down as you’re trying to maneuver it into a hot dutch oven. You can also do some fun shapes, like braids and rings. It’s much easier to do rolls this way, too.

* Use a Thermometer

It can be difficult to strictly regulate the internal temperature of a dutch oven. Counting coals is a good idea, but if it’s cold out, or windy, or any of a number of factors,

Over 350,000 Free Food and 9,000 Drink Recipes

the heat can vary. That means, I'm never sure when it's done. Cooking a certain length of time is no guarantee. Looking at the "golden brown" of the crust doesn't work, because I can never tell if it's done inside. In a dutch oven, it's not always practical to reach in, lift out the loaf and thump it.

My solution? Stick a meat thermometer in it. If it's between 180 and 200, it's done. 180 for the lighter types of breads, 200 for heavier breads.

So, there you have my ideas on making breads in a dutch oven. Follow the recipe, and follow these hints, and you'll do better than you did before, I can almost guarantee!

How To Cook In A Halogen Oven

Halogen ovens offer convenience, a compact size and a significant reduction in time and energy. They operate by surrounding food with radiant heat regulated by a built-in fan

creating an environment that completely penetrates and heats efficiently. Meals can be quickly prepared and ready to eat in a hurry. This method of cooking with infrared heat is safe and works well with a variety of dishes from appetizers to main entrees and desserts.

Hints for Preparing Meals in a Halogen Oven

Halogen ovens provide a clear advantage because of the reduced cooking time required, typically around 50%. For chefs wanting to prepare a favourite recipe that calls for a standard oven, they will need to adjust the cooking time accordingly. Another option is to lower the temperature and keep the cook time the same. Meals should be monitored during the cooking, particularly when a new recipe is tested, to ensure that the meal is at the desired doneness.

Another benefit of Halogen ovens is the ability to cook frozen foods directly from the freezer. Defrosting is not required but may affect the cook time slightly. Because the process is so efficient, extra oils or fats normally needed for other types of cooking processes are eliminated. The result is a healthier meal.

halogen ovens do not require preheating. Once the food to be cooked is placed in the glass bowl, the chef sets the time and temperature and the cooking process starts immediately. Any

Over 350,000 Free Food and 9,000 Drink Recipes

fats or liquid waste dissipates to the bottom of the bowl making it easy to clean up. Some ovens are also equipped with a self-cleaning function.

Basic How-To Instructions

The difference between a meal cooked in a conventional oven and a halogen oven varies only with the cooking time, not the preparation. Foods may be prepared in the same manner using marinades, seasonings and similar ingredients as found in any favourite recipe.

One-dish meals are an ideal choice for halogen ovens because the poultry or meat can be combined with potatoes and other vegetables to cook at the same time. Most ovens feature a separate shelf to aid in separating food types, for example, a chicken from the accompanying vegetables. For many dishes both the meat and vegetables may be combined and cooked at the same time. The top rack is typically used for grilling while the lower rack works well for heating casseroles, cooking vegetables and baking.

Although halogen ovens regulate heat and offer an efficient cooking method, some meals do well with by turning the food occasionally. Large cuts of meat, pork, spareribs, steaks and chicken breasts cook faster and more evenly with occasionally turning. Baked desserts do not require any turning. These

ovens require metal cooking tins, glass cookware or oven-proof dishes for foods premixed foods. Plastic dishes and storage containers are not suitable cookware and may melt during the cooking process.

*Prepare

If the chicken is frozen, thaw under cool running water for several hours, or ideally, thaw in the refrigerator for at least 24 hours. On cooking day, preheat the oven to 350 degrees and take the chicken out of the fridge. Place in the sink. Remove any wrappings and reach inside the cavity to pull out the neck, heart, and other organs that may be there. Wash all under cool running water and pat dry with paper towels. Place chicken on a plate and clean your hands and work surfaces immediately. Rub whole chicken with 2-3 tablespoons of olive oil and season with one of these combinations: poultry seasoning and black pepper; paprika, salt, and pepper; lemon-pepper seasoning and salt; oregano, basil, and garlic; rosemary and tarragon; or any seasoning blend you like.

*Bake

For beer-can chicken:

Open a fresh can of beer and drink (or pour out) about 3/4 of it. Holding the chicken in one hand, angle it slightly and ease the beer can into the chicken's cavity. Carefully stand the chicken up so that it is supported and upright on top of the can. Put can and chicken, standing up, onto a roasting pan or cast-iron skillet. Bake for 1.5 to 2 hours.

For roast chicken:

Cut up potatoes, carrots, and onions into 1-inch cubes. Place

in the bottom of a roasting pan. Place chicken, breast-side up, on top of the bed of vegetables. Roast 1.5 to 2 hours.

For baked chicken:

Place chicken, breast side down, into a roasting pan. Bake in 350* oven for 60 minutes. Remove from oven and carefully turn the chicken breast side up and place back in the oven for at least 30 more minutes. This method will help the breast remain moist and tender.

*Test

For all methods, the chicken is done when the chicken registers 165 degrees on an internal meat thermometer at the deepest part of the breast and in the leg near the bone.

*Finish

Remove chicken (and vegetables, if using) from roasting pan, and pour off all but 3 tablespoons of juices. Put roasting pan or cast-iron skillet on your stove and heat over medium-high heat. Pour 2 cups of wine, chicken broth, or water into pan and deglaze. Scrape bits of chicken off the bottom and sides of pan and season sauce with salt and pepper to taste. Cook the sauce at a simmer until it has reduced by at least half. Serve over chicken. Enjoy!
