Personnel, electric pressure cookers in addition to sophisticated computer program control, the various security measures for accident prevention is essential, such as opening the lid or power failure, when the pressure is higher than 0.05 atmospheres could not open the lid, the safety valve in 3 seconds can make the pressure to normal within, these are the most basic security measures. Each brand has its own characteristics in terms of security information, however, the current design of electric pressure cooker, or there are some security flaws.

Recent years, electric pressure cooker over security incidents occurred in many, many of whom are well-known brands. For example in October 2008, Fujian Chu consumers at a local supermarket to buy an electric pressure cooker, he used the pot soup, timing 25 minutes. When the time is coming, Mr Chu Couguo not see Tom Well, surprise, bang, the lid flew. Chu face and neck burns, eye burns conjunctival hyperemia. Conclusions show that the existence of electric pressure cooker virtual button hidden dangers, and Mr. Zhu has responsibility for inappropriate use. March 7 this year,
